MAXIMUM THREAT PROTECTION TO SECURE WHAT MATTERS MOST
UDTSecure™
NEXT-GENERATION MANAGED SECURITY SERVICES AND SOLUTIONS

CHALLENGE
It’s not a matter of if you’ll suffer a cyber-attack, but when. When the time comes, will you be ready to respond? Cyber threats continue to evolve rapidly. Your mission critical systems and data are relentlessly being attacked by sophisticated threat actors attempting to steal important information. Your technology is vulnerable, and teams are challenged to keep up with these evolving attacks.

SOLUTION
UDTSecure™ provides organizations an advanced suite of managed security and threat intelligence services and solutions to quickly detect and respond to incoming threats focused on stealing critical data or disrupting operations. Our services are designed to become an extension of your operations and significantly improve your security posture. Customizable service offerings deliver solutions aligned with your business requirements.
BENEFITS

• Tailored service options allow you to customize security services
• Centralized security monitoring of cloud, on premise and hybrid environments
• Vendor-agnostic, compliance-driven modular platform with maximum flexibility and scalability
• Efficient integration of multiple third-party security tools, systems, devices and applications
• Behavioral-and signature-based monitoring
• Extensive event correlation library
• Fully staffed 24/7 in-house Security Operations Center (SOC) that augment internal security teams and reduce operational costs
• Log capture, analysis and archiving capabilities
• Customer security dashboard with comprehensive reporting and automated ticketing systems
• Incident response and forensic capabilities
• Audit logging and reporting to satisfy regulatory guidelines across several industries, including HIPAA, PCI / QSA, GLBA / FFIEC, and more
OUR CAPABILITIES

UDT IDENTIFY
Every organization has a unique risk profile due to the sensitive data they maintain and the industry regulations with which they are required to comply. UDT Identify is designed to help customers identify and manage their risk and compliance requirements while identifying critical gaps in their current security programs.

UDT PROTECT
Having a layered security approach is critical to protecting businesses from attack. However, with each new technology comes added complexities. UDT Protect is designed to limit or contain the impact of potential cybersecurity events through helping customers architect, deploy and manage their security solutions.

UDT DETECT
Attackers can compromise systems within minutes, but most attacks go undetected for more than 160 days on average. UDT Detect unifies critical security tools under one location and combines them with 24/7 real-time security operations to detect events quickly and provide immediate response.
UDT RESPOND
The costs of the average breach almost doubles in the first 30 days. Therefore, the ability of an organization to quickly respond to an incident has become one of the most critical components of a security program. UDT Respond assists customers in implementing and managing critical components of an incident response program.

UDT RECOVER
It’s not if, but when. The new reality in security is that no matter what industry you’re in, breach of your network could happen. UDT Recover helps customers investigate and monitor dark web activity, identify the causes of data leaks, and ultimately resume business operations.
